

Financial institutions bought the compliance software. **The reporting is still done by hand.** We change that.

AI Flow works with the systems you already use. We do the reporting your team does by hand today and hand it back checked, on schedule, with the proof behind every number.

THE PROBLEM

The systems don't talk

The data sits across Salesforce, core systems, transaction platforms, spreadsheets, and different teams. None of them speak to each other.

You chase every number by hand

You email each deal team to confirm what closed, then wait on the replies. That chain becomes your only record.

When someone leaves, the knowledge is gone

The reasoning lived in their head and their emails. Copilot and ChatGPT can't give it back.

WHAT COMPLIANCE TEAMS TELL US

"I HAVE TO GO THROUGH THIS ONE BY ONE AND ASK THE DEAL TEAMS BY EMAIL, DID THIS THING CLOSE?"

"REGULATORS CAN COME BACK SEVERAL YEARS LATER AND ASK FOR RISK AND COMPLIANCE ARTIFACTS."

"WE HAD TO GO BACK TO THE REGULATOR AND CORRECT OUR REPORTING FROM THREE QUARTERS AGO."

WHAT WE BUILD

We automate assembly, reconciliation, validation and evidence collection your team does by hand.

	Core banking	Transaction systems	
Email	01 Recurring regulatory reporting Done and checked, on schedule, ready to sign off and submit.	02 Continuous control testing You sample a few controls by hand each cycle. We monitor all of them and capture the misses.	Teams
CRM	03 Proof packs for the regulator They come back years later for the proof behind a number. We keep it with the report.	04 Reporting the first line can actually file Fewer errors landing on compliance. The rules live in the tool, so the first line can't miss them.	Vendors
	Spreadsheets & Documents	Built around the systems you already use.	

WHY US

RegTech Platforms

You operate the tool. The manual work around it remains.
We're not a SaaS, we don't ask you to migrate data. We work with existing systems.

Dev Agencies

They build what you specify. You still define what "correct" means.
We are not another dev shop that just places engineers, we think the solution end-to-end.

AI Flow

We do the work between your systems and the finished report. The numbers are right, and when the regulator asks where one came from, you have the answer.

HOW WE WORK

Compliance Diagnostic

1 - 2 weeks

Map one recurring workflow from source data to sign-off. See where the manual work and the risk actually sit.

Build One Workflow

4 - 8 weeks

Build that workflow around your existing systems and take it through to a real, review-ready output.

Expand

Ongoing

Add more reports, controls, evidence packs, and registers on the same foundation instead of starting again.

Your name is on the filing. We help you make sure you can stand behind every number on it.

Start with one workflow your team still does by hand.
